

THE CERATOPOGONIDAE INFORMATION EXCHANGE

The CIE, issued twice a year (no subscription fee), was begun in 1968 as a newsletter to facilitate communication among workers interested in the Ceratopogonidae. The format is extremely flexible. Contributions may be of any length and deal with any subject having some bearing on the study of ceratopogonids. For example, contributors may report their current interests or plans, observations or techniques of probable value to the readership, requests for addresses, study material or reprints, or any other matter of concern. The newsletter serves also as a bulletin for planning and communicating information on meetings, symposia, workshops and so forth. Finally, there is in every issue a compilation of recent literature in the field. Any person(s) wishing to contribute to the newsletter or to receive future issues by email should contact:

Dr. C. Steven Murphree email: steve.murphree@belmont.edu
Department of Biology Phone: 615-460-6221

U.S.A.

CIE No. 107 –May 2021 -The Ceratopogonidae Information Exchange Newsletter

Research Colleagues,

I hope that this issue of the CIE Newsletter again finds each of you in good health during this challenging period of our history. I continue to be thankful for the help of a Vanderbilt University science librarian in searching databases for recent literature due to COVID-19 library closures. The Recent Literature section contains citations of 121 original research papers, reviews, books, reports, and letters representing diverse areas of research. I have again included figures with images from four of these papers on the last pages of this issue.

I would like to highlight the Sontag et al. tribute to Professor Ryszard Szadziewski, and encourage you to read about the path Ryszard took to become the preeminent paleoentomologist of the Ceratopogonidae. My thanks to all who sent material to be included in this issue.

If anyone is not listed in the Directory of Workers, please send your contact information (or an update) to me. Lastly, please also send copies of your published papers, research summaries, requests for information, etc. to me for the December, 2021 issue by Friday, Dec. 3rd.

With Kind Regards,
Steve Murphree, Nashville, Tennessee, U.S.A.

Announcements

Cancelation of the Livestock Insect Workers Conference (LIWC) **June 14-17, 2020 in Dallas Texas**

The 2021 LIWC that was to have been held in Kerrville, Texas, on June 13-16, has been cancelled due to travel restrictions and other uncertainties. An in-person LIWC Conference will be held in Dallas, Texas, in summer, 2022.

Arthropod-Borne Animal Disease Research Unit

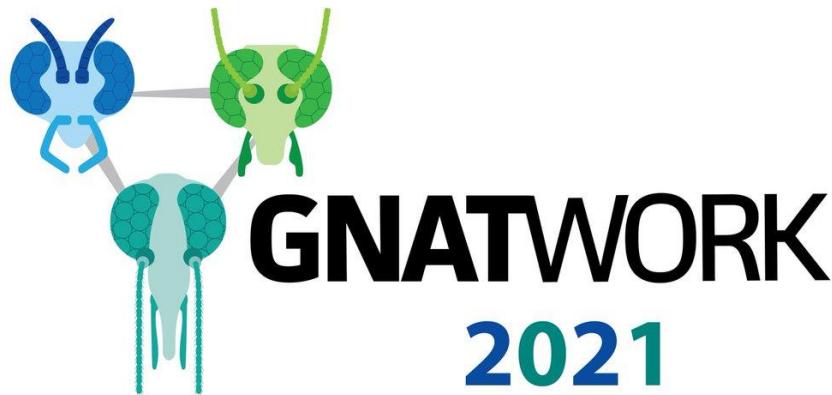

- **Position: Post Doctoral Research Associate**
- Location: Manhattan, KS
- Application Deadline: Open until filled
- Tentative start date: Oct 2021

Job Description

We are recruiting a motivated Postdoctoral Research Associate to join our team at the Arthropod-Borne Animal Diseases Unit to study the potential role of RNAi in blocking arbovirus transmission by *Culicoides* biting midges. These extremely efficient vectors transmit several animal disease arboviruses including re-emerging vesicular stomatitis virus (VSV) bluetongue virus, and epizootic hemorrhagic disease virus, Schmallenberg, African horse sickness, and bovine ephemeral fever viruses. Understanding interactions between the midge immune system and these arboviruses is critical to developing effective disease control strategies. Exploiting innate vector responses, such as RNA interference (RNAi), specifically exogenous-small interfering RNAs (exo-siRNAs), has shown promising results in generating arbovirus-refractory mosquito vectors. Recent preliminary evidence that midges use RNAi to regulate arbovirus replication suggests exo-siRNAs may work as a molecular mechanism to reduce viral proliferation and block arboviral transmission.

The Research Associate will develop and optimize RNAi techniques in midges and determine effects of VSV-specific exo-siRNAs on infection dynamics and transmission rates. Transcriptomics and bioinformatics (e.g., Gene Ontology enrichment, KEGG pathway mapping) will be used to identify VSV-targeted defense mechanisms and identify additional innate responses differentially expressed during virus infection (e.g., Toll, IMD, Jak/Stat). The research goals are to block VSV replication and transmission in midges and identify overall innate immune responses of midges to VSV that may lead to additional molecular targets. These goals will be key for the long-term translational goal of using endosymbionts to deliver targeted dsRNA, rendering midges resistant to infection, and blocking transmission of VSV and other arboviruses.

Successful applicants should have received a Ph.D. within the last 4 years in microbiology, virology, molecular biology, or entomology. Preferences will be given to candidates with research experience in molecular entomology, arbovirology, and transcriptomics/bioinformatics. Potential candidates should be able to work both independently and collaboratively in a research group, must be a U.S. citizen, and pass a minimal security background check. Funding provides salary plus benefits for two years. Interested applicants should email a cover letter, CV, and contact information for 2-3 references to Dr. Barbara Drolet at <mailto:barbara.drolet@usda.gov>.

The Gnatwork 2021 Conference will be held online on Monday 24th May 2021

Featuring online presentations from our 8 funded projects, along with targeted sessions by our directors, our preliminary conference programme is as follows:

09:45 - 10:00 Welcome and Introduction

10:00 - 11:00 Call 1: Validation

11:00 - 11:30 Tea break

11:30 - 12:30 Call 2: Transformative Science

12:30 - 13:30 Lunch break

13:30 - 14:30 Call 3: Community Call

14:30 - Close Achievements of the Gnatwork

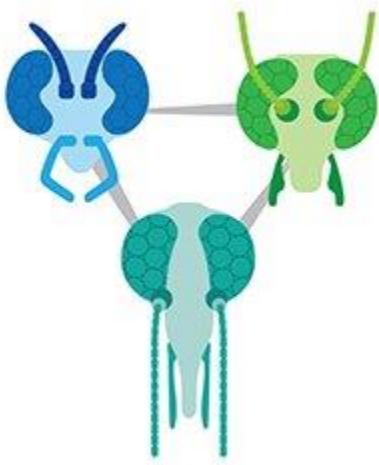

Please note all times are BST (GMT/UTC+1hour)

Registration and attendance at this event is free for all Gnatwork members. We will also be hosting a poster session for all Gnatwork members to demonstrate their research. This will be hosted on both the Gnatwork website and Twitter.

If you would like to attend and/or present a poster please email enquiries@gnatwork.ac.uk so we can register your email address and you will receive the online webinar link and full agenda in due course.

Contributions/Requests from Scientists:

From: Jessica Stokes and Simon Carpenter, The Pirbright Institute, Surrey, UK

The Gnatwork, a network that aims to bring together workers on biting midges, sandflies and blackflies, is continuing to increase in membership and has a range of resources that may be of interest to CIE members. We have held three grant calls for catalyst projects funding collaborative research. Along with protocols spanning taxonomy, field work methodologies and molecular techniques we will also be hosting PhD and Masters level theses of interest on our site. We hope that by collecting these bodies of work it will both simultaneously increase awareness and build on the fantastic research already completed on these neglected vector groups. We are also looking to increase our non-published resource section, including everything from recorded talks, to field identification keys and news articles.

Here is where we need your help. If you have completed, or know of PhD and Masters theses on biting midges, blackflies or sandflies we would be very happy to help get them into the public domain. We would also like to hear from you if you have any other protocols or resources on Ceratopogonids that you would be happy to share on our website.

Please contact us at: enquiries@gnetwork.ac.uk

All the current protocols and resources can be found at:

<https://www.gnatwork.ac.uk/resources>

Membership to the Gnatwork is free, with the option of signing up to our monthly newsletter:
<https://www.gnatwork.ac.uk/members/join-the-gnatwork>

Thank you,
Jess Stokes & Simon Carpenter

From: Surajit Kar, Entomology Research Unit, University of Burdwan, India

Spiders belonging to the family Araneidae and Salticidae as natural predators of adult *Culicoides* spp.

Surajit Kar, Biswajit Mondal, Ayan Mondal¹, Abhijit Mazumdar*

Entomology Research Unit, Department of Zoology, University of Burdwan, Burdwan 713104, WB, India and ¹Ecology and Environmental Modelling Lab, Department of Environmental Science, University of Burdwan, Burdwan 713104, WB, India

*Correspondence: Abhijit Mazumdar, Entomology Research Unit, Department of Zoology, University of Burdwan, Burdwan 713104, WB, India <mailto:abhijitbu02@gmail.com>

Introduction

Information on natural predators of *Culicoides* spp. is very scant. However, Marsh (1986) and Downes (1978) reported predators of *Culicoides*, although spiders were not mentioned in the lists. Predatory behaviour of spiders on engorged adult *Culicoides* spp. was recorded through digital photography and video. This article is primarily based on the observations made during resting biology experiments.

Study sites, Materials and Methods

Three study sites were selected 1.Deshbandh [23°06'58.2"N, 87°14'03.9"E], shed- open type, date of collection 14 & 15 August,2019; 2. Dharan [23°02'57.7"N, 87°51'47.5"E], shed- open type, date of collection 9 - 11 and 18-20 September, 2019; 3.Sodepur [22°42'21.4"N, 88°22'55.8"E], shed type- open cattle shed, date of collection -16 - 18 October, 2019 .

Within the animal sheds, spiders including the prey were collected and subsequently preserved in 70% ethyl alcohol for further identification. The collected spiders were identified after Tikader and Biswas 1981; Tikader 1987 and adult *Culicoides* spp. were identified by following Wirth and Hubert 1989. This report is based on direct observation and activities were recorded through photographs and videography by using a mobile camera with 20x macro lens (Skyvik 20x).

Results

It was found that the *Neoscona* sp. (family: Araneidae) (n=11) juveniles preferred small sized insects which included engorged females *Culicoides* spp. (Fig-1) from their orb web; whereas adults selected large sized insects but excluded adult *Culicoides*. The adults of *Menemerus* sp. (n=9) (Fig-2) and juveniles of *Marpissa* sp. (n=6) belonging to the family Salticidae preyed upon adult *Culicoides* spp. (Fig-3) resting on walls of the animal sheds harbouring cattle and goats.

Besides, the predatory behaviour of the spiders viz, orientation, pursuit and attack were recorded within the shed. Laboratory based studies on this aspect are underway.

De Clercq. 2021.** Nearly complete genome sequences of two bluetongue viruses isolated during the 2020 outbreak in the Grand Duchy of Luxembourg. *Microbiology Resource Announcements* 10(14):e00210-21.
- Vengust, G., Vengust, D.Z., Toplak, I., Rihtaric, D. and U. Kuhar. 2020.** Post-epidemic investigation of Schmallenberg virus in wild ruminants in Slovenia. *Transboundary and Emerging Diseases* 67(4)1708-1715.
- Wall, G.V., Wright, I.M., Barnardo, C., Erasmus, B.J., van Staden, V. and A.C. Potgieter. 2021.** African horse sickness virus NS4 protein is an important virulence factor and interferes with JAK-STAT signaling during viral infection. *Virus Research* 298:198407 [Read Abstract].
- Wang, A., Yin, J., Zhou, J., Ma, H., Chen, Y., Liu, H., Qi, Y., Liang, C., Liu, Y., Li, J. and G. Zhang. 2021.** Soluble expression and purification of bluetongue virus type 1 (BTV1) structure protein VP2 in *Escherichia coli* and its immunogenicity in mice. *PeerJ* 9:e10543.
- Wang, H., Song, L., Zhang, X. and X. Zhou. 2021.** Bluetongue viruses act as novel oncolytic viruses to effectively inhibit human renal cancer cell growth in vitro and in vivo. *Medical Science Monitor* 27:e930634.
- Wernike, K., Reimann, I., Banyard, A.C., Kraatz, F., La Rocca, S.A., Hoffmann, B., McGowan, S., Hechinger, S., Choudhury, B., Aebischer, A., Steinback, F. and M. Beer. 2021.** High genetic variability of Schmallenberg virus m-segment leads to efficient immune escape from neutralizing antibodies. *PLoS Pathogens* 17(1):e1009247.
- White, J.R., Williams, D.T., Davies, K., Wang, J., Chen, H., Certoma, A., Davis, S.S., Weir, R.P., Melville, L.F. and D. Eagles. 2021.** Bluetongue virus serotype 12 enters Australia - a further incursion of novel western lineage genome segments. *Journal of General Virology* 102(3):001536 [Read Abstract].

Yang, J.-L., Chang, C.-Y., Sheng, C.-S., Wang, C.-C. and F.-I. Wang. 2021. The tip region on vp2 protein of bluetongue virus contains potential il-4-inducing amino acid peptide segments. *Pathogens* 10(1):3.

Zhang, N., Sun, Y., Li, M., Xu, Q., Chen, Q., Zhang, R., Cong, Y., Zhang, Z. and J. Zhao. 2021. A comment on "Zoo animals as sentinels for Schmallenberg virus monitoring in Spain". *Veterinary Microbiology* 254:108996.

Žiegytė, R., Platonova, E., Kinderis, E., Mukhin, A., Palinauskas, V. and R. Bernotienė. 2021. Culicoides biting midges involved in transmission of haemoproteids. *Parasites & Vectors* 14(1):27.
